

# Vici Routz SP

## The best you can give to your crop

**Vici Routz SP is a natural product used for drenching. It contains soil probiotics, biostimulants, prebiotics and vitamins that stimulates the crop growth and root system, increases the tolerance to soil borne diseases which results in increased nutrient uptake and increased yield.**

### Mode of Action

Soil probiotics and natural origin biostimulants in Vici Routz SP act as bioprimers enhancing crop vigour, disease resistance, nutrient uptake, drought tolerance and contribute to healthy crop and bumper yield.

### Dosage and application method

**For nurseries:** Dissolve 1.5g/ L of water and apply solution through rose can, drip lines or apply solution as a soil drench to the root zone of crops.

**For seedling/planting material:** Dissolve 1.5g/ L of water, dip seedling, planting material in the solution.

**For perennial crops:** Dissolve 1.5g/ L of water and apply solution as a soil drench to the root zone of crops.

### Time of application

- After sowing in nursery beds
- Seedling, planting material dip at the time of transplanting, planting
- Two and three weeks after transplanting

### Advantages

- Improves crop vigor and makes the crop less susceptible to diseases.
- Boosts the plant's resistance to drought and other types of abiotic stress.
- Acts as a biostimulant – a treated crop becomes stronger and grows better. This results in greater yield.
- Contributes to the achievement of greater nutritional value in crops.
- Vici Routz SP is 100% natural and safe for both people and the environment.
- It is non-toxic. There is no re-entry period following treatment, and no waiting period before harvesting either.

### Compatibility

Vici Routz SP is compatible with biopesticides, biofertilizers. It is advisable to avoid mixing with chemicals.

### Pack size

Vici Routz SP is available in 100g, 250g, 500g and 1kg packaging.
